

PROPOSALS FOR LAND EAST OF HORNDEAN

CONTEXT ANALYSIS

Prior to developing the draft proposals for the site we first undertook an assessment of the wider site context. This involved looking at the existing movement networks (pedestrian/cycle, public transport and road network) in the surrounding area. We also looked at the site's relationship with existing services and amenities in the Horndean area to understand how best to connect to these facilities and to establish what new facilities should be provided on site.
